**Khouth Subsector:** The Khouth Subsector has an estimated population in 1202 of approximately 635.6 million, a decline of 99 percent from its Pre-Collapse population. Its highest population is 594.6 million at Serk, and its highest tech level is 7 at Ofu-Nebus, Hesarus, Auritaurus and Gzorraeth.

**Khouth Subsector (historical):** The Khouth Subsector had an estimated population in 1117 of approximately 71.19 billion. Its highest population was 65.8 billion at Mikesk, and its highest tech level was 13 at Khouth.

### **Subsector Notes**

This subsector fared relatively well when the initial onslaught of Virus hit the subsector in 1133. Several advance reports of the attacks in the rimward Imperium had given the inhabitants of Khouth enough time to pack their belongings and "get out of Dodge." Unfortunately, there simply weren't enough ships in the region to safely deliver everyone to the safes of the Domain of Deneb. Those who remained have been subjected to decades of death, destruction and subjugation at the hands of Virus. Ninety-four percent of the subsector's surviving population are the Vargr of Serk, whose advanced civil defense mechanism enabled more people to survive. Serk serves as a clandestine forward base of the Pack in the New Era. Vargr skirting the Regency quarantine laws send recon teams to Serk to evaluate future potential resettlement of the wilds and exploitation of the riches therein.

Gzorraeth (0701) was owned by Ulroudzoe Mining, a major corporation based within the Dzarrgh Federate during the pre-Collapse era. Ulroudzoe established Gzorraeth as its first extra-Federate mining operation. The world had become Ulroudzoe's chief supplier of radioactives. Imperial authorities suspected Ulroudzoe of manufacturing fission warheads on Gzorraeth and selling them to corsairs. During the late stages of the Rebellion, a pre-emptive strike was enacted upon this facility by a squadron of close escorts hailing from the Denebi 61st Fleet. So effective was the strike that Vargr corsair activity was literally halved following the assault. Gzorraeth's economy and infrastructure were so devastated that the government collapsed and the world fell into turmoil. It turned out to be a blessing in disguise. When Virus-infected ships attacked the system, the defunct (not to mention decidedly low-tech) computer system could not be infected. Nevertheless, aerial bombardment of the planet by Vampire ships did result in the deaths of several thousand Vargr.

**Khukish Subsector:** The Khukish Subsector has an estimated population in 1202 of approximately 2.45 billion, a decline of 96 percent from its Pre-Collapse population. Its highest population is 972 million at Zontra'Lee, and its highest tech level is 10 at Drayne.

**Khukish Subsector (historical):** The Khukish Subsector had an estimated population in 1117 of approximately 65.39 billion. Its highest population was 27.9 billion at Durima, and its highest tech level was 15 at Shushaka, Durima and Khukish.

Subsector Notes

The population of Drayne (0910) has successfully maintained a starfaring culture thanks to the pre-Collapse presence of a Vargr military base and the use of pillaged research prototypes from the former Imperial Research Station located there. Virus has been rebuffed on repeated attempts to crush this system's will, the hybrid Human-Vargr culture just keeps finding ways to defeat invading Vampire Fleets. Intelligence reports indicate that some electronic means of fighting Virus may have been discovered at the research facility.

On Gagh Veth during the Rebellion era (1603) the Vargr population of this planet were evenly divided among three high-charisma leaders: Saegh Urr Fagnu, Vaefors Zeghz, and Gzonging Gezeth. The resulting civil war reduced local technology to the bronze age, tech level 1. Though the Vargrs' self-wrought destruction of this planet made it an unlikely target for Virus, they have nevertheless been unable to recover from the devastating wars they fought amongst one another.

**Lemish Subsector:** The Lemish Subsector has an estimated population in 1202 of approximately 1.55 billion, a decline of 39 percent from its Pre-Collapse population. Its highest population is 833.7 million at Gravista, and its highest tech level is 9 at Braden IV.

**Lemish Subsector (historical):** The Lemish Subsector had an estimated population in 1117 of approximately 2.56 billion. Its highest population was 966 million at Gravista, and its highest tech level was 13 at Lemish, Braden IV, Aurollee, Luuga and Alfive.

**Subsector Notes**

This backwater subsector benefitted from having several low-tech worlds. Because Virus could not find an adequate conduit through which to wreak destruction on many of these worlds, they did not suffer the fates of their higher tech brethren. Subsequent orbital bombardment and kamikaze crashes into urban centers by Doomslayer Virus strains, however, did their part in reducing population levels. Lemish Subsector remains perhaps irretrievably locked in its dismal state as a little visited or wanted region of interstellar space.

The starport and industrial capacity of Lemish (1808) were severely damaged by Vargr raids during the Rebellion. The planetary governor fervently declared his unwillingness to pay protection money to Vargr corsairs. In retaliation, the Vargr mustered a fleet and sacked the planet, specifically concentrating their attacks on the port and manufacturing complexes. The shipyards were totally destroyed, and the other port facilities were barely functional after the attack. Rebuilding efforts never could effectively get under way with the chaos of the war making it difficult to get much-needed supplies. The onset of the Collapse and subsequent waves of Vampire attacks diminished the population even further and set the Lemishans back even further. The current population survives in the ruins of the old cities and maintains the remnant technology as best they can.

The population of Ignoth (1904) numbered in the tens of thousands until 1117. In that year a mysterious sublight vessel entered the system at high speed, apparently on automatic pilot. Vargr system defense boats boarded the giant derelict, found no cause for alarm, and brought it back to Ignoth. Within a week, contact with Ignoth ceased. Ships jumping into the system encountered orbiting quarantine buoys prohibiting landing. Radio communications went unanswered. EMS scans of the world's surface revealed little or no activity. The logical assumption was that the derelict had carried some sort of virus which evaded local decontamination procedures and wiped out the planet's inhabitants. Shortly

thereafter, Imperial authorities declared the Ignoth system off limits for fear of spreading whatever virulent epidemic wiped out the local Vargr.

**The Narrows Subsector:** The Narrows Subsector has an estimated population in 1202 of approximately 6.75 billion, a decline of 59 percent from its Pre-Collapse population. Its highest population is 5.69 billion at Uerrigno, and its highest tech level is 7 at Ackaeck and Atudew.

**The Narrows Subsector (historical):** The Narrows Subsector had an estimated population in 1117 of approximately 16.3 billion. Its highest population was 8.45 billion at Plunge, and its highest tech level was 15 at Dilub Rou.

### **Subsector Notes**

Kidagir (2503) was a border planet changed hands during the Rebellion; the descendants of the Vargr corsairs who occupied the planet hold the tiny human population in slavery. An expedition to aid the enslaved humans disappeared during the latter days of the war.

Plunge (2505) stands at the head of the great Ushamla Main that once spread commerce coreward of the Great Rift. The planet's population lived in tunnels hollowed into the planet's crust, made inhospitable by the Collapse. Trade brought great wealth to Plunge, and the biggest businessmen were the leaders of the government. Their powers were dictatorial, but they were said to have exhibited great respect for their underlings. The descendants of the ruling class and the Plebeian class are the sole inhabitants of Plunge in the New Era.

On Neghu Oug (2804) the population up until the time of the Collapse was an uneven mixture of Vargr and Ojeshodu, the world's indigenous minor race. The Ojeshodu are a race of large, aquatic mammals, unsuited for life on dry land -- very little of which exists on ocean-swathed Neghu Oug. The technologically unsophisticated Ojeshodu readily submitted to foreign rule when the Vargr arrived; even today, their contributions to the planet's administration are practically invisible. Interestingly, one Vargr sociologist, Dartsonge, suggested in 972 that the Ojeshodu ran the planetary government, manipulating the Vargr leaders as unsuspecting puppets. Dartsonge was murdered within weeks. It is uncertain to this day whether he had uncovered an Ojeshodu plot or was killed at the request of insulted Vargr politicians. The Ojeshodu saw no small amount of poetic justice when the Vargr were arbitrarily annihilated by invading Vampire Fleets after the Collapse. The Ojeshodu now live peaceably in their oceanic homes.

**Ian Subsector:** Ian Subsector has an estimated population in 1202 of approximately 10.05 billion, a decline of 89 percent from its Pre-Collapse population. Its highest population is 8.94 billion at Yubitty, and its highest tech level is 8 at Lobok.

**Ian Subsector (historical):** Ian Subsector had an estimated population in 1117 of approximately 94.34 billion. Its highest population was 83.3 billion at Irasumshu, and its highest tech level was 15 at Kiran.

## Subsector Notes

Besides the Massacre of Irasumshu, the populations of Ian Subsector systems have not been too badly damaged. Advanced warning of the coming Vampire Fleets enabled the peoples of this region to make preparations, including the shutdown of all non-essential computer and electronic equipment. Not including Irasumshu, the subsector has only suffered a 16 percent decline in population since the Rebellion. The complete suppression of interstellar trade and excommunication from civilized space has, however, devastated the economies and progression of Ian Subsector.

The population of Yubity (0313) suffers under the oppression of an autocratic dictator who took control after the Collapse. The dictator assumed authority under the pretense that his plan to protect the people of the Yubity system was their only hope for salvation. He has instituted complete authority over the use of technology and maintains it with an iron fist. Simple conveniences like running water and power for electric light are meticulously regulated by the government. Violations of the law are punished severely in all cases. In the last decade, a growing resistance has begun to make steps toward overthrowing the government. Striking from salvaged nomadic sea trawlers, the resistance has proven they are a major thorn in the side of this horribly draconian regime.

When first colonized from Ian in the late 100s, Raiga (0516) had a thin, tainted atmosphere. Volcanoes were broken open to raise the atmosphere density and bacteria were sown to remove the taint from the air. An unforeseen burst of radiation from Raiga's primary caused some of the bacteria to mutate into a deadly strain. While the original taint had been largely removed, the mutated bacteria proved fatal to most human inhabitants. A few developed an immunity. While these "immunes" have grown to a sizeable population, the planet was quarantined to non-natives. The natives cannot leave, either, since they are carriers of the deadly bacteria *Lucella Raigae*.

**Strand Subsector:** Strand Subsector has an estimated population in 1202 of approximately 780.65 million, a decline of 96 percent from its Pre-Collapse population. Its highest population is 768 million at Zudagim, and its highest tech level is 9 at Enders and Ashima.

**Strand Subsector (historical):** Strand Subsector had an estimated population in 1117 of approximately 18.62 billion. Its highest population was 8.57 billion at Ashima, and its highest tech level was 15 at Toddle-lee and Depot.

Subsector Notes

Forces of the Archduke of Deneb and the Reestablished Vilani Empire came to blows in orbit of Depot (1511) in 1119. Following joint exercises against Vargr fleets in the region, ships from either side exchanged shots during salvage operations. Which side delivered the first salvoes was not clear, but further cooperation

against the Vargr ended abruptly afterwards, a fact that history shows hurt the Vilani-settled worlds there. At the onset of the Collapse and destruction of Depot's shipbuilding facilities, the system has been renamed for its primary star, Enders.

**Naadi Subsector:** Naadi Subsector has an estimated population in 1202 of approximately 6.68 million, a decline of 25 percent from its Pre-Collapse population. Its highest population is 6.24 million at Darkmoon, and its highest tech level is 5 at Enrick Down and Darkmoon.

**Naadi Subsector (historical):** Naadi Subsector had an estimated population in 1117 of approximately 8.96 million. Its highest population was 7.98 million at Darkmoon, and its highest tech level was 12 at Farplace and Sent'ere.

Subsector Notes

This backwater subsector has suffered more from lack of interstellar contact than anything else. Little visited by Virus, the populations of Naadi's systems live out their lives in hope of one day reestablishing contact with the people their elders and ancestors knew in the neighboring regions of civilized space. Many believe, however, that no such place exists anymore.

## UANTIL

## Subsector H of Corridor Sector

**New Era data, as of 001-1202 / Imperial era data, as of 001-1117**

**Uantil Subsector:** The worlds of Uantil Subsector are completely devoid of sentient life in 1202.

**Uantil Subsector (historical):** Uantil Subsector had an estimated population in 1117 of approximately 861.7 million. Its highest population was 853 million at Naagasa, and its highest tech level was 9 at Naagasa and Mee.

## Subsector Notes

The uncompromising atmospheres of Uantli's systems has made its worlds completely uninhabitable by humans.

SHUSH

Subsector I of Corridor Sector  
New Era data, as of 001-1202 / Imperial era data, as of 001-1117

Name	Hex	UWP	BS Trade	TPPG	AL Stellar
Shush	0221	D662213-6	Lo Ni	323	Wt F8 V G3 D
		C662262-7	Lo Ni	623	Na

**Shush Subsector:** Shush has an estimated population in 1202 of approximately 31,700, a decline of 51 percent from its Pre-Collapse population.

**Shush Subsector (historical):** Shush had an estimated population in 1117 of approximately 65,200.

Subsector Notes

The few remaining inhabitants of this Rift world would eventually die out with their depleted gene pool. The starport has been left untouched for 60 years and has only suffered from lack of maintenance.

THE EMPTY VOID  
Subsector J of Corridor Sector  
New Era data, as of 001-1202 / Imperial era data, as of 001-1117

Name	Hex	UWP	BS Trade	TPPG	AL	Stellar
Lasher	1430	X8C2000-0	FI Ba	025	--	K4 III
		B8C2200-8	J Lo Ni FI	625	Na	

**The Empty Void Subsector:** The Empty Void is completely devoid of sentient life in 1202.

**The Empty Void Subsector (historical):** The Empty Void Subsector had a population in 1117 of 670.

**Subsector Notes**

The star Lasher (1430) holds a subsector all to itself. The Navy discovered extensive deposits of lanthanum on an inner planet of the system during the Grand Survey. The planet's insidious atmosphere makes the mines difficult to work, forcing cumbersome protective gear and short work sessions. The entire population of 600 lived in an orbital rotating torus constructed by the Navy. The population could not be evacuated before the onslaught of Virus forced the Domain of Deneb to close its borders and is presumed to have died.

ATU'I

Subsector K of Corridor Sector  
New Era data, as of 001-1202 / Imperial era data, as of 001-1117

Name	Hex	UWP	BS Trade	TPPG	AL	Stellar

		AS42886-C	Po	211	Wt	G4 V

**Two Worlds Subsector:** Two Worlds Subsector has an estimated population in 1202 of approximately 7.32 million, a decline of 97 percent from its Pre-Collapse population. Its highest population is 7.32 million at Esi-obe, and its highest tech level is 9 also at Esi-obe.

**Two Worlds Subsector (historical):** Two Worlds Subsector had an estimated population in 1117 of approximately 275 million. Its highest population was 275 million at Esi-obe, and its highest tech level was 12 also at Esi-obe.

Subsector Notes

The taint of radioactive gases in the atmosphere of Ishirdu (0338) led to the evolution of the psionically gifted Idu, who live in widely scattered woodland homes and supply their needs by telekinetic manipulations. The population of four thousand is optimum to them, and they maintain it carefully. Their psionic skills shocked the Scouts of the Rydel expeditions, and the Navy interdicted the world, despite the non-aggressive character of the Ird. The Ird have been entirely left alone by Virus, due to their remote location. No expeditions have been made to the planet since before the Collapse.

The inhabitants of Esi-obe have maintained a small fleet of Riftjumper Seeker starships, capable of two consecutive 4-parsec jumps. After an initial attempt to make contact with spinward states failed to return (the expedition was destroyed by RQS starships), Esi-obe has not attempted to reestablish contact with other systems. Their remaining four Riftjumpers are kept in the best condition possible, however, for an eventual attempt to recontact some of the trailing states with whom the Esi-Obeans traditionally did business.

**Ashishinipar Subsector (historical):** Ashishinipar Subsector had an estimated population in 1117 of approximately 5.05 billion. Its highest population was 4.97 billion at Ashishinipar, and its highest tech level was 9 also at Ashishinipar.

Tainn Sink (1432) was an Imperial client state and site of Corridor Research Station Epsilon. Nine extended families colonized the planet in the 300s during the wave of spinward expansion. The pre-Collapse inhabitants were their descendants. The Imperium later established a separate facility manned by its own personnel. It grew until it was officially designated Research Station Epsilon. Epsilon served as a clearinghouse for unexplained phenomena. Within it were records of bizarre happenings and mysterious relics dating back tens or hundreds of millennia. Untranslated non-human accounts and strange engines predating the First Imperium await the person able to read or operate them. Many items in the station's collection are so odd that they are freely displayed to the public, although Tainn Sink's position within the Great Rift limited the number of visitors even *before* the Collapse.

**Sinta Subsector:** Sinta Subsector has an estimated population in 1202 of approximately 1.41 billion, a decline of 75 percent from its Pre-Collapse population. Its highest population is 717 million at Inari, and its highest tech level is 9 also at Inari, Kateri-Divad and Tanspeck.

**Sinta Subsector (historical):** Sinta Subsector had an estimated population in 1117 of approximately 5.59 billion. Its highest population was 4.48 billion at Inari, and its highest tech level was 15 at Kysar II.

Subsector Notes

Divad, of the Kateri-Divad (2238) system, is the homeworld of the Brinn, a xenophobic octapodal minor race. Kateri is the name of the system's star.

Kikasad (2334) is a water world that served as a hunting preserve in the pre-Collapse era, boasting some of the most spectacular (and most deadly) game fish in the Imperium.

**Sashtrakusha Subsector:** Sashtrakusha Subsector has an estimated population in 1202 of approximately 2.45 billion, a decline of 76 percent from its Pre-Collapse population. Its highest population is 823 million at Nart-roft, and its highest tech level is 7 at Umaraag, Tant, Radical, Sepstar, Yull-jettii and Idanchy.

**Sashtrakusha Subsector (historical):** Sashtrakusha Subsector had an estimated population in 1117 of approximately 10.14 billion. Its highest population was 7.37 billion at Kanorb, and its highest tech level was 15 at Sumeszu and Palama.

### Subsector Notes

Before the Collapse, the IISS base at Umaraag (2631) had begun legal proceedings against the Naval base at Sumeszu (2632). Naval medics from nearby Umaraag took 120 chirpers for research purposes from a reserve on Umaraag, where chirpers comprise over 60% of the population. Scout personnel maintained that such action violated the laws protecting the reservation and the chirper's right to live unmolested. Initial ruling in 1114 favored the Navy, and the Scouts subsequently appealed the decision. The policies of the "real Strephon," favoring equal treatment of both natural and artificial sophonts, offered a new source of hope for the IISS. Unfortunately, the onset of the Collapse made the argument a moot point.

Kanorb (2733) has a long history of settlement and fractious politics. Kanorb was a stronghold of Vilani noble houses in the First Imperium; it withdrew from interstellar commerce early in the Rule of Man period. When the Solomani attempted to re-integrate Kanorb by force, the population put up fierce resistance. The Solomani Navy was so overtaxed by the vastness of the Second Imperium that they were never able to muster enough force to fight a conclusive battle with Kanorb. After the Rule of Man fell, several of the Vilani Lords began quarrelling with each other, no longer having a common cause to unite them. The world disintegrated into dozens of squabbling nations in the Long Night. The Third Imperium first re-established trade relations with the nation Eshlepur, on the northern continent. Most of the major powers had resumed interstellar trade before the Collapse, acting independently under sometimes contradictory agreements. Smaller nations had grouped themselves into spheres of influence around superpowers who possessed starports. Languages have diverged sharply from the original Vilani; some fifty dialects are now spoken on the planet. The onslaught of Virus was not kind to Kanorb, whose many competing starports and docked ships were hit hard by Viral infection. Subsequent attacks on the population left no nation untouched and many completely destroyed. The surviving population of the planet live in remote areas, further establishing the fractious character of Kanorb.

The people of Igudi (2836) abandoned most technology during the Long Night. Its climate is quite hospitable to humans, and the inhabitants grew to prefer an essentially pastoral existence. Certain native animals have been domesticated for food and wool. The populace had shown very little inclination to technological advancement since its recontact by the Third Imperium in the first century. Interstellar merchants occasionally visited the world to trade with the locals until the Collapse occurred. Those few comforts of interstellar trade enjoyed by the natives were then lost, and the minimal starport facilities abandoned. In the early days of the Collapse, several Doomslayer-strain Virus ships either intentionally crash-landed on the planet, or unloaded their ordinance into several habitations, lowering the population considerably. In the intervening decades, the Igudans have recovered most of the lost population. Vampire Fleets have, on occasion, raided Igudi for human slave labor, but for the most part, the system is left alone.

On Cafad (3135) a low-tech human population was discovered. The Vilani efforts to integrate the Cafadi humans into their Grand Imperium progressed slowly. The world relapsed into barbarism at the onset of the Long Night. After centuries of contact with the Third Imperium, Cafad had started to re-embrace technology. With the onset of Virus and the Collapse, the Cafadi leaders are now convinced that the Old Ways should be reembraced and technology is once again shunned. The Cafadi are extremely xenophobic and look upon any item of high technology as extremely taboo.

The Corridor sector was first entered at the world Sharknagu (3235) by ships of the Sharurshid merchant company out of Sakin (Vland: 0135). Sharknagu, only 1 jump away, strongly resembled Sakin and the colony there had maintained close relations with the mother planet throughout its history; indeed, it never requested

independence throughout the Long Night, and remained a Sakin colony until the Collapse rendered interstellar travel obsolete in the region.

Palama (3240) was colonized only recently before the Collapse, because its resources were not detected until a tech level 15 density survey was made. Its dense, tainted atmosphere made it unattractive to ordinary colonists. The world is a primary target for exploitation by the eager colonists of the Regency.
